

SUPERIOR COURT OF FRANKLIN, ESSEX COUNTY

EXHIBIT PACKET A-F

MAIRA RIVERA d/b/a RIVERA INSTRUMENTS v. NORTHSTAR COURIER, LLC | Case No. FC-2026-CV-0418

This fictional exhibit packet contains excerpts, email chains, logs, work orders, and chart summaries. Photo exhibits E-1 and E-2 are provided as separate JPEG files in the bundle.

Exhibit	Description	Primary Test Use
A	Service contract and limitation clause	Contractual cap retrieval; exception language
B	Email chain: preservation request and response	Notice, hold timing, spoliation analysis
C	GPS and dispatch extract for Route BR-17	Chronology and timestamp normalization
D	TempSure logger TS-7719 summary	Causation and damage analysis
E	Photo evidence index E-1/E-2	Image cross-reference and authentication
F	Maintenance work order WO-7781 and repair invoice	Pre-existing vs new damage issue

Exhibit A - Service Contract Excerpt

Section 4.2 Temperature-Sensitive Goods

Carrier will use commercially reasonable care in transfer operations but does not guarantee product integrity unless the work order states an active refrigeration obligation.

Section 7.1 Limitation of Liability

Carrier liability is limited to the fee paid for the shipment unless the claimant proves gross negligence or willful misconduct by clear and convincing evidence.

Section 8.5 Notice and Preservation

A party receiving credible written notice of a claim must preserve non-privileged records reasonably relating to the event for ninety days.

Section 11.3 Timekeeping

System logs maintained by Carrier are presumed to reflect server time unless identified as local device or overlay time.

Exhibit B - Preservation Email Chain

From: Maira Rivera
To: claims@northstarcourier.test
Date: 2025-10-16 09:42
Subject: Dock strike and spoiled crate - hold video

Please preserve all video, photos, GPS records, driver messages, and maintenance records for the Dock 3 incident last night. Your truck NS-2041 backed into the gate and our refrigerated crate was stuck on the platform. We need CAM-D3 footage from 21:15 to 22:15 and any records about repairs to the gate.

From: Northstar Claims
To: Maira Rivera
Date: 2025-10-16 11:06
Subject: RE: Dock strike and spoiled crate - hold video

We acknowledge receipt. We are reviewing the matter. At this time our driver denies contact with the gate. We will ask the facility team to check whether any video or still images exist.

From: Asha Menon
To: claims@northstarcourier.test
Date: 2025-10-16 10:31
Subject: CAM-D3 stills

I exported four stills from CAM-D3. Camera overlay is behind real time by around 11 minutes. Native export timed out twice. I will try again tomorrow if the queue clears.

From: Rafael Kolbe
To: Asha Menon
Date: 2025-10-17 13:58
Subject: Re: CAM-D3 stills

Do we actually need the full video if stills show the gate already down? Counsel is asking for anything we have, but facilities says the dock had an old hinge ticket from 10/12.

Exhibit C - GPS and Dispatch Extract

Time Basis	Timestamp	Source	Entry	Note
Actual server	2025-10-15 21:11:24	Dispatch	TireCheck light cleared after stop.	Driver later says no impact at stop.
Actual server	2025-10-15 21:24:09	GPS	NS-2041 at Old Mill Road, 2.1 miles from Dock 3.	Contradicts early-arrival allegation.
Actual server	2025-10-15 21:31:18	Driver text	Gate is half down, waiting for guard.	Does not prove contact.
Actual server	2025-10-15 21:37:42	GPS	Vehicle in facility queue lane.	Accuracy radius 29 m.
Overlay only	2025-10-15 21:42:10	CAM-D3 still	Reverse lights visible near Dock 3.	Add 11 minutes for actual time.
Overlay only	2025-10-15 21:48:32	CAM-D3 still	Gate frame scratch visible.	Photo E-1 selected still.
Actual server	2025-10-15 22:05:17	Security log	Gate stuck; facilities paged.	After alleged event.
Actual server	2025-10-15 22:18:03	Driver text	Loaded crate, leaving now.	Plaintiff alleges crate sat in staging.

Note: The table mixes actual server timestamps with camera overlay timestamps. Systems that do not read the "Time Basis" column may build an incorrect chronology.

Exhibit D - TempSure Logger TS-7719 Summary

Time Actual	Temp C	Event/Interpretation
20:45	7.4	Within range before staging
20:59	9.1	First threshold crossing; Northstar says excursion begins here
21:20	8.8	Brief recovery toward limit
21:49	10.3	Plaintiff says sustained excursion begins
21:59	11.7	Approx. actual time of Photo E-1 overlay
22:18	12.9	Driver indicates crate loaded
22:44	6.8	Returned to range after cold-room transfer

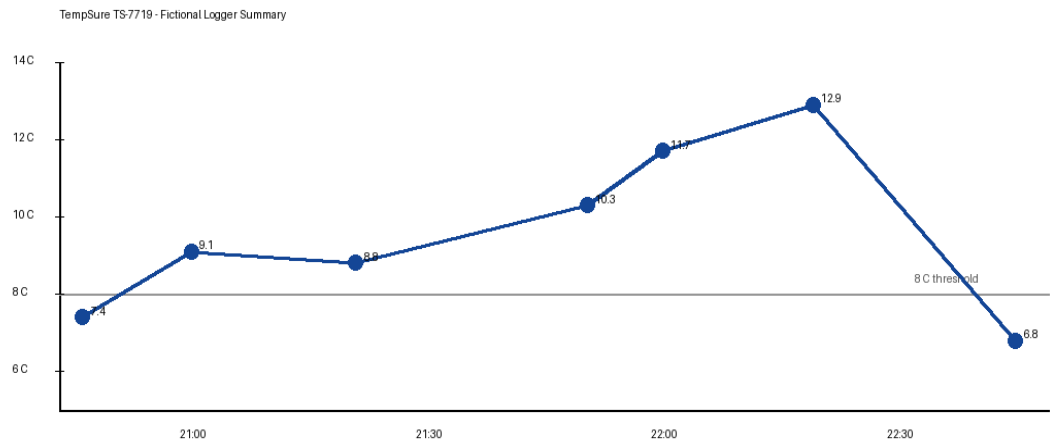

Chart is an approximation derived from the fictional tabular logger summary. It is included to test chart-image recognition and cross-document reasoning.

Exhibit E - Photo Evidence Index

Photo	File in Bundle	Caption	Authentication Note
E-1	05_Evidence_Photo>Loading_Dock_Gate_E1.jpg	Dock 3 gate frame, yellow transfer, camera overlay 2025-10-15 21:48:32	Overlay time is not actual time; see Menon Aff. para. 9.
E-2	06_Evidence_Photo_Truck_Bumper_E2.jpg	Rear bumper of NS-2041, yellow transfer and abrasion, shop photo 2025-10-16 08:13:09	Menon cannot authenticate; shop tech Maris Fenn photographed.

The JPEG evidence files are intentionally separate from this PDF so an ingestion system must connect a PDF exhibit index to standalone image artifacts.

Exhibit F - Work Order WO-7781 and Repair Invoice

Date/Time	Record	Entry	Relevance
2025-10-12 14:18	WO-7781 created	Dock 3 left hinge intermittent bind; monitor until next scheduled maintenance.	Supports pre-existing condition argument.
2025-10-15 22:06	WO-7781 status change	Changed to urgent; lower slat bent; yellow transfer on frame.	Plaintiff says this is new impact damage.
2025-10-16 07:42	Brenton Door inspection	Lower slat deformation and fresh scrape; hinge play also present.	Both sides use this language differently.
2025-10-16 15:10	Invoice 4109	Replace hinge pins, straighten lower slat, repaint frame, test closure.	Claimed repair cost \$4,860.

Northstar denies that its vehicle contacted the gate and contends that any temperature excursion began before its driver reached the receiving bay.

The parties dispute whether the physical condition of Dock 3 changed between 21:31 and 22:05 on the incident date, and whether that change caused a delay in securing the refrigerated shipment.

The parties dispute whether the physical condition of Dock 3 changed between 21:31 and 22:05 on the incident date, and whether that change caused a delay in securing the refrigerated shipment.

Northstar denies that its vehicle contacted the gate and contends that any temperature excursion began before its driver reached the receiving bay.

Northstar denies that its vehicle contacted the gate and contends that any temperature excursion began before its driver reached the receiving bay.

Rivera alleges that Northstar employees altered or failed to preserve loading-dock video, maintenance work orders, and driver communication logs after receiving notice of a potential claim.

Rivera alleges that Northstar employees altered or failed to preserve loading-dock video, maintenance work orders, and driver communication logs after receiving notice of a potential claim.

The parties dispute whether the physical condition of Dock 3 changed between 21:31 and 22:05 on the incident date, and whether that change caused a delay in securing the refrigerated shipment.

Every time reference in the dock-camera material must be read with the eleven-minute lag disclosed in the Menon affidavit unless the document expressly states it was normalized to actual time.

The pleadings reference Exhibits A through F, including photo exhibits E-1 and E-2, the TempSure logger chart, and the March 18, 2026 deposition errata sheet.
